Startup Time

First request ready in...

```
Spring Boot:  ~2.5 seconds
Quarkus:      ~0.8 seconds
Micronaut:    ~1.0 seconds

Quarkus wins with GraalVM native:
  → 0.015 seconds startup!

Spring Boot 3.x with native:
  → 0.07 seconds (much improved)
```

💡 For serverless/lambda: Quarkus > Micronaut > Spring

Memory Usage

RAM consumption at idle

```
Spring Boot:  ~150-200 MB
Quarkus:      ~30-50 MB
Micronaut:    ~50-70 MB

Quarkus native image:
  → 12 MB (!)

Spring wins in features
Quarkus wins in efficiency
```

💡 Memory matters in containerized environments

Ecosystem & Libraries

Where Spring Boot dominates

```
Spring Boot:
  → Spring Security, Spring Data, Spring Cloud
  → 200,000+ StackOverflow answers
  → Every Java dev knows it

Quarkus: Growing fast but smaller
Micronaut: Niche community

// Spring ecosystem = unbeatable
```

💡 Hiring for Spring Boot = easy. Others = harder.

Developer Experience

Day-to-day coding feel

```
Spring Boot:
  → Annotation-heavy but familiar
  → Massive documentation
  → Hot reload with DevTools

Quarkus:
  → Live coding (instant reload)
  → Dev UI dashboard built-in

Micronaut:
  → Compile-time DI (fast but strict)
  → Less magic, more explicit
```

💡 Spring = comfortable. Quarkus = modern. Micronaut = strict.

When to Use What

The honest answer

```
Use Spring Boot when:
  → Enterprise app, big team
  → Need mature ecosystem
  → 95% of Java backend jobs

Use Quarkus when:
  → Serverless / AWS Lambda
  → Need fast startup + low memory

Use Micronaut when:
  → Microservices with strict perf needs
  → IoT / edge computing
```

💡 For job search: Spring Boot. Always.

The Verdict

No BS comparison

```
Jobs available:
  Spring Boot: ▓▓▓▓▓▓▓▓▓▓▓▓ 92%
  Quarkus:     ▓ 5%
  Micronaut:   ▒ 3%

Performance:
  Quarkus:     ▓▓▓▓▓▓▓▓▓▓▓▓ Best
  Micronaut:   ▓▓▓▓▓▓▓▓▓ Great
  Spring Boot: ▓▓▓▓▓▓ Good enough

Learn Spring Boot. Know Quarkus exists.
```

💡 Master Spring Boot first. Explore others for fun.
